PROFESSIONAL EXPERIENCE

Research Assistant | University of Michigan, advised by Prof. Todd Hollon   Sep 2021 - present

- Developed FastGlioma, a visual foundation model for fast (10x less) tumor detection. (**Nature, 2024**).
- Proposed Slide Pretraining Transformer (SPT) for gigapixel slide image embeddings. (**NeurIPS 2024, AIM-FM**)
- Introduced HiDisc, a hierarchical self-supervised learning framework for microscopy images. (**CVPR highlight, 2023**)
- Curated and released the first Stimulated Raman Histology dataset and benchmark. (**NeurIPS D&B track, 2022**)
- Designed a ReAct agent that retrieves critical context through reasoning and action for patient survival prediction.
- Developed a scalable training framework for CLIP training on 220K patient data and inference pipeline on 52 tasks.

Applied Scientist Intern | Amazon (Seattle)   May 2025 - Aug 2025

- Trained Qwen2.5-VL-7/32B for multi-turn Tool-Integrated Reasoning (TIR) with RL, extending pure text reasoning to interleaved text, code, image reasoning for complex multimodal tasks.
- Our TIR method outperform various baselines by average 4.8% across six datasets including MathVista, CharXiv, and V*.
- Designed cost-aware rewards to curb unnecessary Python calls cutting invocations 45% with no accuracy loss.

Machine Learning Engineer | Tencent (Beijing), advised by Dr. Pengfei Xiong   Feb 2021 - Aug 2021

- Fine-tuned GPT-2 and UniLM on social media and news corpus for title generation used in WeChat Search.
- Doubled the training speed by distributed training and increased 5% in the ROUGE score by beam search.
- Won **fifth** award out of 4335 participants in an ACM challenge: Multimodal Video Advertisement Competition.
